

➤ Sport In The Box 2

- Sport In The Box 2 is our latest generation of software to create impressive videoboard productions for sports. Sport In The Box lets you create and control dynamic content on your videoboards during the game, to engage both audience and your team by easily creating a professional production. Sport In The Box handles video, graphics with live data, player presentations, lineups, scoreboards, commercials and match events. Synchronized playout to multiple video screens, rings, in-house tv, streaming or broadcast. Sport In The Box is also easy to use, allowing it to be the perfect solution for both smaller clubs and larger arenas.

Graphics and Data

Sport In The Box comes with graphic templates for each sport to create full screen scoreboards, player presentations and lineups. It also comes with overlay “TV” graphics to be used on top of live video inputs. The templates can be customized by selecting your team colors to create tailored presentations straight out of the box. By adding team lineups, logos, player picture templates into Sport In The Box it becomes very easy to display the right graphics with a single click. Custom graphics for a single team can also be created upon request.

Sports and Controllers

Sport In The Box supports most team sports like: Soccer, Hockey, Basket and Handball. It comes with graphic templates suited for each sport and can also connect to almost every different brand of match controllers.

Video Inputs, Replays and Playback

Sport In The Box can have multiple live video inputs and together with graphics, the ability to make replays and play other video contents allowing the operator to create a full video production for the videoboard. Sport In The Box also supports multiple video outputs for setups with more than one videoscreen. Size and position of each video output can be set to match any videoboard, removing the need for expensive scalers. Contents can also be setup to allow synchronized playout over different screens at the click of a single button, and be triggered at a match event.

Other Sports and Applications

Sport In The Box can also be used for many other sports and applications. Swimming and Athletics are two examples of applications where Sport In The Box is used to create professional result graphics presentations.
